

KOKOWALL® Garden Screen

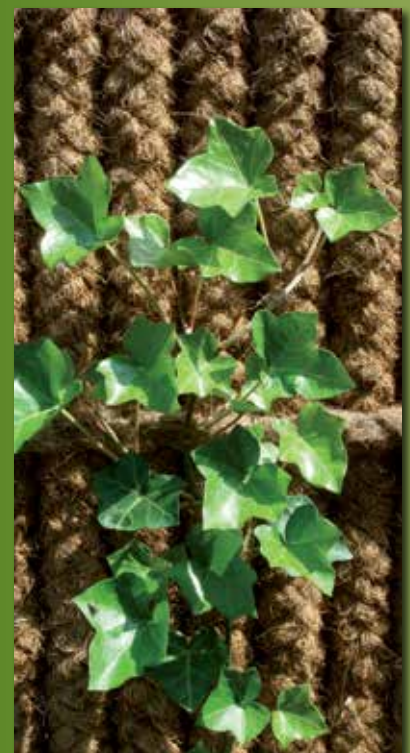

Natural looking and ideally suited for plants!

The Kokowall® garden screen's natural look befits any environment. The Kokowall® garden screen's outer side is finished with natural and durable coco fibres, which ensures a pleasing and ideal surface for climbing plants. The Kokowall® garden screen will be overgrown with plants within a few years.

Kokowall® garden screen panels consist of galvanized steel U-channels filled with a row of coco fibre wrapped plastic poles. Two coco fibre taped steel poles reinforce the coco fibre plastic poles.

Kokowall® garden screens are particularly suited for many types of climbing plants. That is why Kokosystems includes free of charge special plant clips that will help you secure the climbing plants to the coco fibre finish. The **Kokowall®** garden screen is a patented Dutch design and is manufactured in the Netherlands.

KOKOWALL® Garden Screen

Natural looking and ideally suited for plants!

Recommended Use

Kokowall® garden screens can be placed between hardwood, concrete or galvanized steel poles. Kokosystems offers matching doors (90 x 180 cm) with a cylindrical lock or barn lock. **Kokowall®** garden screens' additional features: bevelled edges and panels with galvanized concrete mesh (inserted behind the coco poles).

Kokowall® garden screens can be fitted (horizontally and vertically) with steel mesh panelling.

Size Range

Standard sizes **Kokowall®** garden screen:

Standard Kokowall® garden screen	W x H	180 x 180cm
Big Kokowall® garden screen	W x H	200 x 200cm
Partial Kokowall® garden screen(vertical)	W x H	180 x 90cm
Partial Kokowall® garden screen(horizontal)	W x H	90 x 180cm

Standard weight **Kokowall®** garden screen: 21 kg

Standard width **Kokowall®** garden screen: 5 cm

Kokowall® garden screens can be made to measure at a cost effective price (up to W x H: 200 x 200cm). The screens can be adjusted in size during the assembly process.

Steel and Hardwood Poles

Garden screens can be mounted to hardwood poles (7 x 7 cm) with the stainless steel (included) assembly clamps (wooden poles not included). The garden screen's edges will be held secure by the galvanized steel pole's flange.

Eco Friendly Product

The poles are made of recycled non-PVC plastic. Coco husk is sourced from the coconut's outer layer. The quality of durable tropical coco fibres is similar to that of tropical hardwood. Coconut husk is a recyclable and sustainable product.

Plant Coverage

The **Kokowall®** garden screen will be covered in plants quickly as the screen is ideally suited for climbing plants' aerial roots.

Maintenance

Coco fibres will fade slightly due to sun exposure. The screens' natural looking exterior however will last. We recommend that the exposed screen sections are treated with stain or Bankirai hardwood oil.
